Patient: **KOMORNA YEVA GA360451**   Date of birth: **28.09.2000** Sex: **F**

Results №2718363

Your COVID-19 test result

NEGATIVE

A negative result for this test means that SARS-CoV-2 RNA (the cause of COVID-19) was not detected in the collection sample.

What does it mean to have a negative test result?

A negative test result does not completely rule out being infected with COVID-19.

If your test negative for COVID-19, this means the virus was not detected at the time your specimen was collected. It is still possible that you were very early in your infection at the time of your specimen collectionand that you could test positive later.

Also, you could beexposed later and still develop the illness.For all these reasons, it is important to follow the Ministry of Healthcare of Ukraine guidance, included but not limited to frequent hand washing, social distancing, wearing a face covering, covering coughsand sneezes, monitoring symptoms, and cleaning and disinfectantof frequently touched surfaces –even after a negative test result.

Test information:

Test name	**Test-system manufacturer**
Detection of SARS-CoV-2RNA (COVID-19)	Phoenix (Austria)

Method	**Test-system analytical sensitivity**
Polymerase-chain reaction(PCR), Real time	50 copies/ reaction

Detection type	**Analyzer**
Qualitative detection	RotorGene (Australia)
